

WSB Utility Mapping and As-Built Compliance Solutions

COLORADO'S NEW DIGITAL AS-CONSTRUCTED REQUIREMENTS

We are ready for CDOT's Utility Accommodation Code Rules 3.3.4.3 and 3.4.6.2 implementation. Let's work together to meet requirements.

WSB participated in the early phases of the Colorado Department of Transportation's (CDOT) utility mapping rollout in spring 2020. Our team works with several facilities and contractors and uses best-practice installation methods to provide onsite solutions to meet program requirements. Using high-accuracy equipment, we work with our clients and partners to meet CDOT's positional accuracy specifications. Our collaborative partnership with Trimble, Frontier Precision and software developers allow for turnkey utility mapping solutions.

Let's make an impact.

Meet Digital As-Constructed Requirements (DAC)

We are prepared for CDOT's new Digital As-Constructed Requirements (DAC), effective January 14, 2021.

Reduce Lost Time and Productivity

Our onsite specialists provide certified third-party traffic control inspections, professional engineer stamps, environmental inspections, and utility mapping compliance services.

CDOT Reporting Platform

With experienced staff throughout the state, WSB is ready to provide compliance services across Colorado.

Valuable Data Retention

Retain customized utility mapping data to enhance as-built records. We provide data packages that document projects from start to finish.
